## 1. Introduction

### 1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, required specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

acting with the AFCTN technical staff, gaining experience in use of the standards, and developing increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

## 1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Industrial Data Link's interpretation and use of the CALS standards in transferring Raster data. Industrial Data Link used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

## 2. Test Parameters

**Test Plan:** AFCTB 92-049

**Date of Evaluation:** 31 August 1992

**Evaluator:**  
George Elwood  
Air Force CALS Test Bed  
HQ ESC/ENCP  
Suite 200  
4027 Colonel Glenn Hwy  
Dayton OH 45431-1672

**Data Originator:**  
Industrial Data Link  
William Largent  
3949 Ruffin Road  
San Diego CA 92123

**Data Description:**  
Technical Manual Test  
1 Document Declaration file  
2 Raster files

**Data Source System:**

Raster	
HARDWARE	Unknown
SOFTWARE	Unknown

Evaluation Tools Used:

MIL-STD-1840A (TAPE)  
SUN 3/280

AFCTN Tapetool v1.2.8 UNIX  
AGFA Compugraphics CAPS/CALS v40.4

MIL-R-28002 (Raster)

SUN SparcStation 2

ArborText g42tiff

AGFA Compugraphics CAPS ccitt2caps v6.0x

AFCTN validg4

AFCTN calstb.475

Island Graphics IslandPaint v3.0

Rosetta Technology Preview v3.1

Cheetah

Inset Systems HiJaak v2.02

Software Publishing Corporation

(SPC) Harvard Graphics v3.0

Xerox Ventura Publisher

Standards  
Tested:

MIL-STD-1840A  
MIL-R-28002A

### **3. 1840A Analysis**

#### **3.1 External Packaging**

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was not marked with the magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was not enclosed in a barrier bag or barrier sheet material as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files that were recorded on the tape.

#### **3.2 Transmission Envelope**

The 9-track tape received by the Air Force CALS Test Bed contained MIL-STD-1840A files. The files were named per the standard conventions.

##### **3.2.1 Tape Formats**

The 1840A tape was run through the AFCTB Tapetool v1.2.8 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was also read using AGFA's CAPS read1840A without a reported error.

##### **3.2.2 Declaration and Header Fields**

No errors were reported in the Document Declaration file or the data file header records.

#### **4. IGES Analysis**

No Initial Graphics Exchange Specification (IGES) files were included on the tape.

#### **5. SGML Analysis**

No Standard Generalized Markup Language (SGML) files were included on the tape.

#### **6. Raster Analysis**

Both Raster images were checked using the AFCTN *validg4* utility. No errors were reported. Both files were viewed using the AFCTN *calstb.475* utility. Both of the images were displayed without a problem.

The files were converted using Rosetta Technologies' *Prepare* and then viewed and printed using *Preview* without a problem. The resulting hard copies are included in the Appendix of this report.

The files were converted using ArborText's *ADEPT g42tiff* utility with no reported problems. The resulting files were viewed and printed using Island Graphics' *IslandPaint*. The resulting hard copies are included in the Appendix of this report.

The files were converted to an IMG format using Inset Systems' *HiJaak* with no reported errors. The resulting files were imported in the Xerox Ventura Publisher and printed with no reported problems. The resulting hard copies are included in the Appendix of this report.

#### **7. CGM Analysis**

No Computer Graphics Metafile (CGM) files were included on this report.

---

## 8. Conclusions and Recommendations

In summary, the MIL-STD-1840A tape from Industrial Data Link was basically correct. The tape could be read properly using the AFCTN Tapetool utility without any reported errors. The tape was also read using AGFA's CAPS utility without any reported errors.

The two Raster files are valid files and could be used by all of the software tools available in the AFCTB without any reported problems. The Raster files meet the CALS MIL-R-28002A specification.

The tape from Industrial Data Link meets the CALS MIL-STD-1840A requirements.

---
